Further information

PA704 thermal paste is a high-performance, silicone and solvent-free paste that is characterised by its excellent thermal conductivity and high efficiency. It is ideal for a wide range of heat dissipation tasks and improves heat transfer between solids. Its electrical insulating properties are particularly noteworthy, making it a reliable solution in numerous applications. Storage and shelf life: The thermal paste has a shelf life of 12 months if stored in its original sealed container in dry, cool and dark conditions (between 15°C and 25°C). Thanks to its first-class thermal conductivity and electrical insulating properties, PA704 thermal compound offers a reliable solution for demanding heat dissipation tasks. It is particularly suitable for applications in the electronics and appliance industry where efficient heat dissipation and high stability are required.
